

LearningStartup for Africa

#LS4Africa project aims to create an online hands-on training programme for early stage entrepreneurs in Africa, in partnership with Zimbabwe incubator **SkyHub**, with the objective to empower people through entrepreneurship and in particular budding entrepreneurs throughout Africa.

The training programme is taught via short videos by startupper and successful entrepreneurs from Africa, using the LearningStartup methodology.

We are currently "recruiting" the speakers/entrepreneurs and we secured the collaboration of leading-edge e-learning platform **Loop**.

How can you help?

We are building this project from the bottom up, building entirely on the support by volunteers, potentially at zero cost. What can you offer to the project? We need expertise and support for

- short video filming in Africa, Europe and US
- video editing and production
- programme distribution to African incubators
- project graphic design identity
- graphic design of training material
- production of online interactive tools
- you name it!

Looking forward to hearing from you!!!
